DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 1/28/2004 is acknowledged by the examiner.

Specification

2. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-14 rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Pat. No. 6,244,295 (Bartussek et al.). Bartussek et al. disclose a composite component comprising an inner component (26) made of a plastic (col. 2, lines 62-66) with a first coefficient of thermal expansion, an outer component (12) made of metal (col. 4, lines 11-13) having a second lower coefficient of thermal expansion, an internal diameter enlargement that are surrounded by regions having smaller diameters (groove that houses rim 54 in fig. 4), wherein the inner component and the outer component are press fit (col. 3, lines 19-20) together as well as a positive engaged (col. 4, lines 53-60), wherein the outer component (12) is a valve body (fig. 2), an inner valve seat (18), a valve element (24), an elastic element (30), wherein the inner component (26) is a cage, wherein the internal diameter enlargement is a circumferential groove (fig. 4), wherein the inner component has a continuous contour (54), wherein the outer component (12) is formed substantially cylindrical having an annular cross section (fig. 2), and wherein the inner component (26) is coaxial with the outer component (12).

Although the valve body does not start with a groove as claimed, the process of assembling the valve of Bartussek et al. results in the inner component being locked in the groove.

The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product in the prior art, the claim is unpatentable even though the prior product was made by a different process (see MPEP 2113).

Allowable Subject Matter

5. Claims 15-22 are allowed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Pat. No. 6,550,698 (Ness) discloses a check valve with an inner and outer component.
